Illuminated natural stone?

The allure of natural stone, ranging from marble to onyx, Patagonia quartzite, Slate-lite, and other translucent varieties, is capturing attention within the realm of interior design. Renowned for its timeless elegance and distinctiveness, natural stone has become a focal point for designers seeking to elevate spaces. Leveraging LED lighting to accentuate these features proves to be a strategic choice, enriching the textures and colours with captivating allure.

LED Strips

LED Rigid bar

Making the back plate

We use Dibond plates, which consist of two thin outer layers of aluminum with a black core (polyethylene). The combination of aluminum and PE ensures that the material is both strong and light. So ideal for a back plate that we can supply in any desired format. We deliver these plates "Plug & play" to you. There is often not much room for a driver, which is why we use Linear drivers from Lifud. These drivers are ideal for these types of projects.
